

Zoiper iPhone App – MNF Setup Guide

Download the app

- 1) Install the Zoiper app from the App Store (free download) and launch the app.

Set up Your Account

- 2) The first screen you will see on startup is the dialpad. However, to begin using the app you'll need to set up your account, so click the '**Settings**' button in the bottom right.
- 3) From the Settings screen, click '**Accounts**'.

- 4) Click the '+' symbol in the top right to set up your new account.

5) Choose 'SIP Account' from the 'account type' screen.

AccountName:

Give your account a name that will allow you to quickly identify it (it is possible to set up multiple accounts so this will be helpful when it comes to differentiating between accounts). The Account Name field is only for your own reference and does not affect functionality.

You will now need to enter account-specific SIP credential information. Depending on your account's specific setup, you may have received this information when you first signed up.

If not, you can obtain this information by logging into the MyNetFone Customer portal (<https://www.mynetfone.com.au/Portal-Login>) and clicking My Voice.

Domain:

Enter this domain: sip00.mynetfone.com.au

User name:

Enter your MyNetFone SIP user name: (Example: 09123456)

Password:

Enter your MyNetFone SIP password.

Caller ID:

Leave this field blank, as you will manage your caller ID through Easy Office Phone's web interface.

6) Advanced Settings:

Scroll down to the 'Advanced Settings' section and enter the following:

- **Auth username:**

Enter your authorization username (Example: 09123456 - note that this value should be exactly the same as your User ID value)

- **Outbound Proxy:**

Your settings should now look like the following screenshot.

Register

- 7) Assuming you have entered all values correctly, your account should be active and ready. You can now press the green **'Register'** button at the top of the 'SIP Account' settings screen and your account should register with our servers.
- 8) To start using MyNetFone VoIP service, press the **'Accounts'** button in the top left. Next press the **'Settings'** button in the top left, and you will see the **'Dialpad'** button appear in the bottom left of the screen. Press it to return to the dialpad and start making calls.
